

## **FAST USA Launches New Line of High Performance Commercial Vacuums**

### ***FAST USA Premium Vacuum Line Uses Superior European Technology***

PLYMOUTH, MA: FAST USA, a recently formed American Company, has launched a full line of commercial vacuum cleaners that have been marketed in Europe since 2000. The FAST program was developed in cooperation with IVAC a la Carte B. V. FAST products are designed using superior Dutch technology, resulting in a premium line of vacuums that have received rave reviews throughout Europe. FAST currently exports to 38 countries worldwide.

FAST USA offers a complete line of professional vacuum products including uprights, wet tank vacuums, dry tank vacuums, hi-filtration canisters and scrubbers. FAST USA offers competitive pricing with product stocked at their headquarters in Plymouth, MA. The company's slogan "To clean quick think FAST" has generated a great deal of interest from professional cleaning and maintenance personnel. FAST also allows distributors to build their own private label brand.

FAST products include three low decibel Wide Vac uprights with Hepa filtration. Wide Vacs 3.5 and 4.6 offer a full set of attachments while Wide Vac 7.0 is a specially designed heavy duty upright with a 27.5" cleaning path and an eighty foot power cord. The FAST uprights have modular body parts so that you can remove the vacuum head or the vacuum body and send it back for repair. The Free Vac 2.5 is a low noise, high performance backpack vacuum specially developed for cleaning in hard to reach areas.

FAST offers two High-Filtration modular canisters, the 6.0 and the 9.0. The Steady Extra 6.0 is a modular dry vacuum with a full set of attachments. The canisters have Hepa and Ulpa filtration which filters down to .003 microns. The motor is easily removable with a single screw if repairs are necessary. Low noise decibels make it attractive for use in hospitals and nursing homes. The FAST Work Horse line of commercial wet vacuums are some of the strongest built and most powerful in the world. There are seven versions available in various sizes and performance levels.

FAST USA recognizes specialty cleaning markets and has designed unique products to fill their needs. The Clear-Air Vac 9.0 is a compact design certified for clean room application. Safe-T-Vac 9.0 is designed for cleaning electronic equipment with static discharge ability.

The FAST line of Scrubbers includes brush only, a brush and vacuum combination and low moisture alternatives. The Easy Clean scrubber uses a dry carpet cleaning system with an attached vacuum tank so you don't need a vacuum cleaner after you are finished scrubbing the rug. One switch and you can vacuum up the particles from the rug.

FAST professional floorcare products share some innovative yet practical features. There is a lighted switch on all the units to let you know power is getting to the unit. All units have detachable power cords that can be replaced easily. The parts are interchangeable on several models so that tools and attachments can be used on multiple machines.

Among the new products on the horizon for FAST USA is the introduction of a single motor upright in 2009. A full line of wet and dry vacuum tanks are available in stainless steel. Utilizing superior technology and specialized designs, FAST USA will continue to be a contender for premium floor care products.
